

## Changing the location of sketchbook to prevent other party library conflicts

For users who have worked with other Arduino projects in their laptops/computer before this workshop, it is suggested for the user to change the location of sketchbook so as to prevent conflicts with some 3<sup>rd</sup> parties libraries.

**Go to File -> Preferences**

**Create a new folder. In the Sketchbook location, create a new folder by adding–Ameba as seen below:**

**Restart Arduino IDE to effect the changes.**
