

In order to test the MQTT example using the MQTTT app, the following needs to be done.

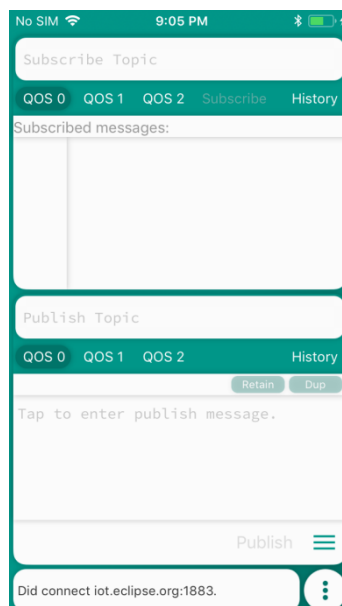

- Once the app is downloaded, the interface looks as follows:

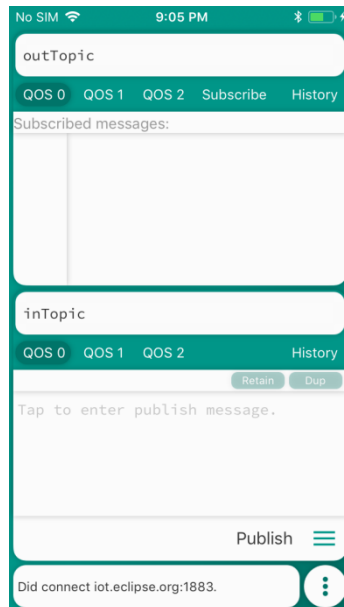

- The MQTT broker URL needs to be entered in the “Host” field and the port needs to be specified as shown below.

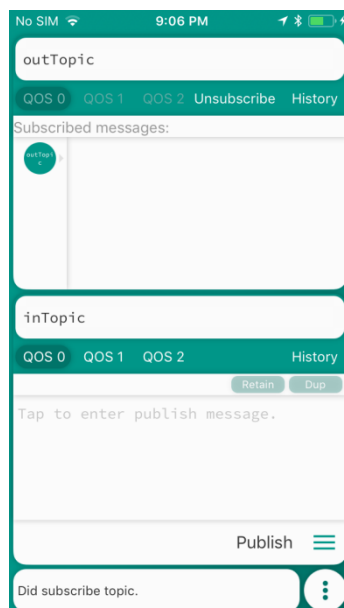

- Once you press connect and the connection is successful, the app switches to the next page as shown below.

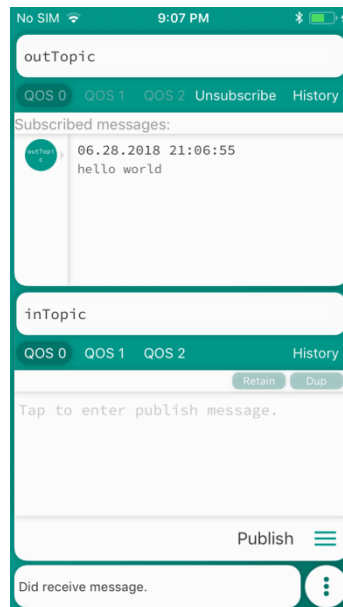

- As you can see there are 2 separate fields for subscribe and publish.

- In order to subscribe to a message, please enter it in the subscribe field and tap subscribe, the button should change to “unsubscribe” as shown below.

- Once subscribed, the topics start arriving from the ameba board as shown below:

- Similarly messages are published in a similar manner as shown below:
